Access Control

ALARM.COM®
for BUSINESS

Smarter Access Control

Alarm.com's cloud-based access control combines intuitive user management with a seamless alarm and video integration. Give employees and visitors the precise level of access they need. Keep track of who's coming and going. Lock doors remotely, assign user codes in bulk, and monitor activity across every access point in your business.

Say goodbye to keys

Buzz visitors in with your mobile app and create rules to lock doors automatically when your business closes.

Provide an extra layer of security to sensitive areas by using the "badge+pin" feature. This dual-action requirement requests employees or visitors to swipe their badges or fobs and enter a user code to access a specific area. Once that area has been accessed, you will receive a custom notification alerting you.

Open doors with your phone

Employees and visitors can now use their smartphones to access doors, instead of carrying a separate badge or key fob.

By installing our Alarm.com branded readers, use the exclusive **mobile credentials** feature to eliminate the need to manage fobs and badges, which are easier to misplace or steal.

Manage users from anywhere

Add or revoke lock control and user codes instantly from anywhere. Assign PIN codes and badges for doors, with easy scanning to add a badge to your system.

Increase efficiency by bulk-adding hundreds of users at once, or setting cards to automatically deactivate on a certain date.

It's an easy enhancement

Smarter Access Control integrates with leading hardware brands so that you don't have to replace locks and card readers or install expensive new hardware. Setup is plug-and-play without cloud-based platform, meaning no on-site server to maintain and no IT degree required.
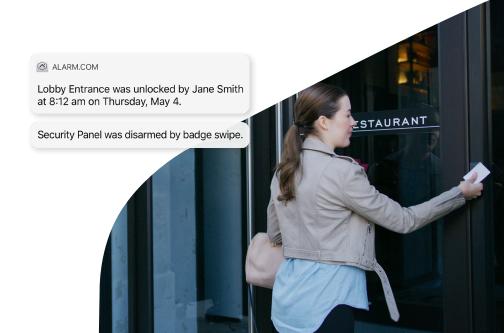

> **"If you have to re-key a building or you have to constantly update door codes because someone forgot a code, that becomes expensive. If I have to go up to a location because I'm the only person with the master code or maybe someone lost a key, that's also expensive."**

Everything works together

Alarm.com gives you extra protection and efficiency by integrating access, intrusion and video monitoring into one intuitive solution.

You can disarm your alarm by swiping your access badge, get video alerts when specific doors are opened, and find video of access events directly from your access history timeline.

ALARM.COM

Lobby Entrance was unlocked by Jane Smith at 8:12 am on Thursday, May 4.

Security Panel was disarmed by badge swipe.
